A MESSAGE FROM THE CEO

Welcome Metroids,

Metrix Coin has come a very long way in a very short amount of time!

FOR EVERYONE. FOR EVERYTHING!

For this to happen, there are a lot of people behind the scenes that have kindly donated their time and their passion to see this project succeed. In this very brief message, I would like to personally thank the entire team for their massive effort over the past years, especially in more recent times, allowing us to all enjoy the benefits of our brand new blockchain (a hard fork of the QTUM chain) that has been coded to suit Metrix. A new era of smart-contract technology on a Governor-based protocol now exists for all Metroids.

Over the year ahead, as a team we look forward to bringing the community many new business partnerships, more real-life use cases for MRX, a much larger community, and overall plenty of new opportunities for everyone to enjoy.

This whitepaper will serve to discuss our vision, our products and the application use of our blockchain. It will also reveal our dedicated roadmap for the year ahead. We will continue to make amendments to best reflect our dynamic project.

We will also provide a technical

whitepaper, known as the purple paper. This document will serve developers with the technical jargon to appreciate our blockchain's potential and how to interact with our chain. In the document we engage with anyone and everyone to interact with what our chain may offer. We aim for mass adoption.

Thank you to our Metroids community for your tireless support and passion for the Metrix Coin project.

Bring on 2021 and ahead!

Trent Richards
CEO

PREFACE

Introducing the 2021 Metrix Coin (MRX) Whitepaper.

Inside these pages, we will unlock the secret gem of the cryptoverse to you. We strongly believe in our path forward, which we are forging alongside our community of Metroids, to create a cryptocurrency with use cases that will bring us into the industry mainstream. What makes Metrix such a strong prospect is our ability to listen to our base, giving those who wish to have a voice in the process the means to do so.

This focus has produced a new, positive direction that has resulted in us completely reworking our brand, our team and our legacy. This has included a hard fork to a new chain, reconfiguring our reward structure to curb inflation, groundbreaking partnerships that incorporate all-important use cases, cementing five new exchanges for

traders and much more. Our community and team know that something special is brewing here, and we wish for you to join us.

It is with great pride that we present to you our new whitepaper and invite you on a journey to the top of the cryptocurrency industry. As a team and a solid community, we have a lot of work ahead and look forward to reaping the rewards of our hard work. In the following sections, we will explain to you where Metrix has come from and where we intend to go.

Lastly, we want you to know that our intentions are nothing short of rising to a top-100 coin on Coin Market Cap (CMC).

**Welcome to Metrix.
Your journey starts here!**

BACKGROUND

Since the beginning of our existence, we have strived to push the limits of innovation to best facilitate our cultural traditions through technology. It allowed human civilizations to grow and advance by making the tasks of our lives easier to perform.

The age of information is no different. In just the last five decades, information technology has evolved in such a unique way. In the early 1970s, the first personal computers made their debut. Soon thereafter, communication protocols, like TCP/IP, modernized our form of communication, allowing computers to connect with one another; this eventually gave rise to electronic messages, or the email system.

In the mid-1990s, the internet was born. Seemingly overnight, populations were given the tools through browsers and web applications to access the World Wide Web (WWW). Fast-forward to 2008, Satoshi Nakamoto released “Bitcoin: A Peer-to-Peer Electronic Cash System,” a financial system model maintaining network integrity between peers as they transact, thus adding value to the collective consortia of computers and servers, or nodes, that comprise the internet.

In other words, Bitcoin’s blockchain technology allows for trustworthy transactions without the need of a banking system. This is a game changing point, as there is no longer the requirement for permission by a human being (i.e. bank manager). No middle man, no restrictions, no business hours to consider and no way this new paradigm can be stopped. Unless, of course, someone turned off the global internet!

In each technological milestone, access to information has evolved and led us to a new form with the ability to create value, or assets, in our current digital age. The concept of creating value, or assets, within information has shifted businesses and communities to further research blockchain technology. They witnessed the emergence of multiple blockchain projects that facilitate efficient and secure topology networks, further enhancing our social and economical developments.

Today in 2020/21 you can pay staff wages with a text message. You can pay for a house in another country within seconds on a Sunday afternoon. You can talk over networks with full encryption to keep your business secrets shared only with the intended person or persons. Let us show you how you can use Metrix in 2020/21!

INTRODUCTION

Founded in Portugal in 2017, Metrix (formerly Lindacoin) was offered as a solution for businesses looking to find scalable solutions (i.e. transfer of value, digitizing assets, or tokenization of assets) while implementing an open and trustworthy ledger powered by Proof of-Work (PoW) and Proof-of-Stake (PoS) consensus. In conjunction with this vision, Metrix developers innovated with great ambition to offer user-friendly desktop and online tools, transforming the technical complexities into a seamless opportunity for anyone to grasp.

Our persistence to succeed has led us to redefine our core values, blockchain, products and services to best serve the needs of our partners, supporters and blockchain longevity.

Core Values: Mindfulness, Efficiency, Teamwork, Reliability, Impact, Commitment and Service.

Metrix is a blockchain governed by the Metroid community in a decentralized fashion. It sets out to implement a smart blockchain that may ascertain its adaptable growth, and a smart e-commerce model while maintaining a seamless operation overall. We provide an ecosystem of products and services connecting everyone to everything. Our METRICS core values encase our vision to spearhead a Metrix Solution for the masses, consumers and businesses. We are mindful of our base as we collectively underline a targeted Metrix

solution with potential businesses. Our goal is to provide efficient solutions to the challenges seen in our social and daily lives. Our decentralized model of governance extends teamwork with an array of experience and skills from people all over the world. The very essence of our team, blockchain, products and services delivers a positive impact that forms a strong reliable foundation as we are committed to serve with excellence.

**A technology that is
“For everyone. For everything!”**

PURPOSE

WE AIM TO OFFER:

01

An energy efficient network through PoS to bring cost-affordable solutions with an eco-friendly footprint.

02

An open ledger that maintains honest transactions which interact and transact seamlessly between parties.

03

Unlimited scalability power with smart-contracts and dApps integration that permit the tokenization of assets between Business-to-Business (B2B) to establish better Business-to-Consumer (B2C) relationships and overall e-commerce experience.

04

Products that drive blockchain accessibility to all people.

05

A flawless payment system across unlimited vendors using MRX coins.

Our core values, vision, and developments, backed by a strong Metroids community of support, has purposely led the project to incorporate a blockchain hardforked from QTUM's chain that encompass both Bitcoin's Unspent Transaction Output (UTXO), and Ethereum's Virtual Machine (EVM). The new chain will be managed by a Decentralized Governance Protocol (DGP) and will incorporate smart-

contracts and decentralized applications (dApps), while powered by Proof-Of-Stake (PoS) algorithm.

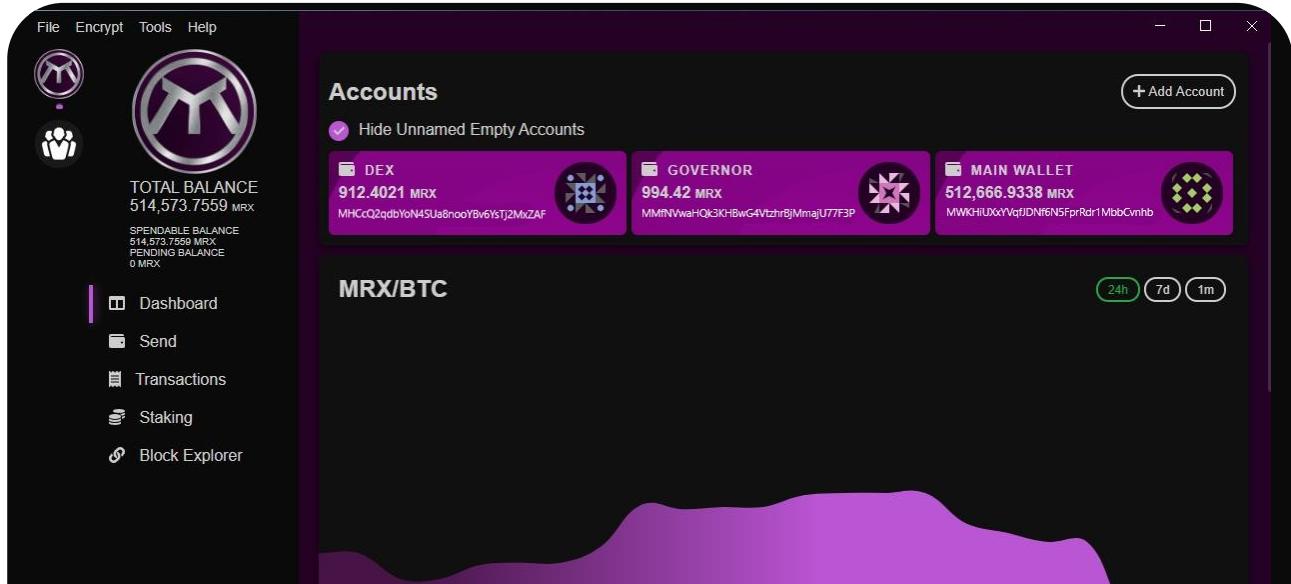

**In simple words,
cutting-edge technology
is being used to power Metrix to
a Top 100 coin on Coin Market Cap!**

METRIX ECOSYSTEM

The Metrix Ecosystem has been created to advance our team, products and community into the year 2021. With our new blockchain coded to suit our Metroids community, Governance is now a certainty. Metrix is now 100% run by the community and is guided and assisted by the Metrix team. Through our Metrix Ecosystem, we will grow as a community in multiple areas at the same time without the previous limitations.

**Metrix truly is:
For Everyone. For Everything!**

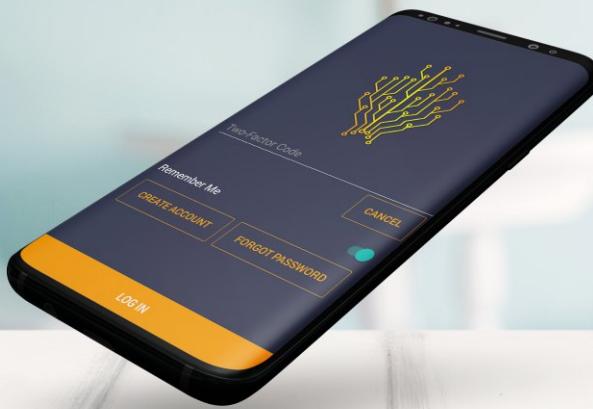

ALTITUDE DESKTOP WALLET

Wallets in 2020/21 are extremely important for investors in a project as well as for long term holders, as they need to be certain that their coins are safe from being hacked. It is imperative to the level of sophistication, and security within a wallet is paramount. We're pleased to advise that the upgraded Altitude Wallet has inbuilt security, allowing each user to have confidence that their coins are safe.

The wallet allows a backup feature which is highly recommended once coins have been sent to the wallet. The custom-built Altitude Wallet was built on Electron for all desktop computers, allowing a simplistic yet stylish user interface. As the network now runs a Decentralized Governance Protocol, you will note that the Governor sits proudly on the top left side of the updated wallets.

Each Altitude wallet allows an easy set up of a Governor node. By locking up 7.5M MRX you can then participate to either make a proposal or voting on a proposal made by another user. Please refer to Metrix Academy on our website www.metrixcoin.com for user-friendly videos that outline how to get the most out of your Altitude desktop wallet. The videos cover everything from the basic installation of your new Altitude wallet through to encryption of your passphrase, backing up your wallet.dat file, exporting your private keys and even setting up a Governor with ease. Altitude is a reliable free desktop option that can be used on Windows and Mac.

As an additive smart feature to the Altitude wallet, Solidity developers may create smart-contracts, decentralized applications, fungible (MRC20) and non-fungible tokens (MRC21).

Built for you.

www.mystakingwallet.com

| MyStakingWallet (MSW)

One of Metrix's valuable products, MyStakingWallet (MSW), is a web wallet and masternode turn-key solution. The product is a "go anywhere"-based product, allowing the user to choose from a desktop application through to an IOS or Android application for those users that are on the go. MSW allows anyone to hold funds securely online, and it also offers the ability to set-up a masternode with ease at the click of a button. Although Metrix no longer uses masternodes on the new chain, we have partnered with other projects where you can enjoy the masternode rewards from their coins on this product whilst staking your Metrix at the same time.

Before MSW, people hired developers who struggled for hours to overcome a learning curve with coding languages and purchased expensive hardware in

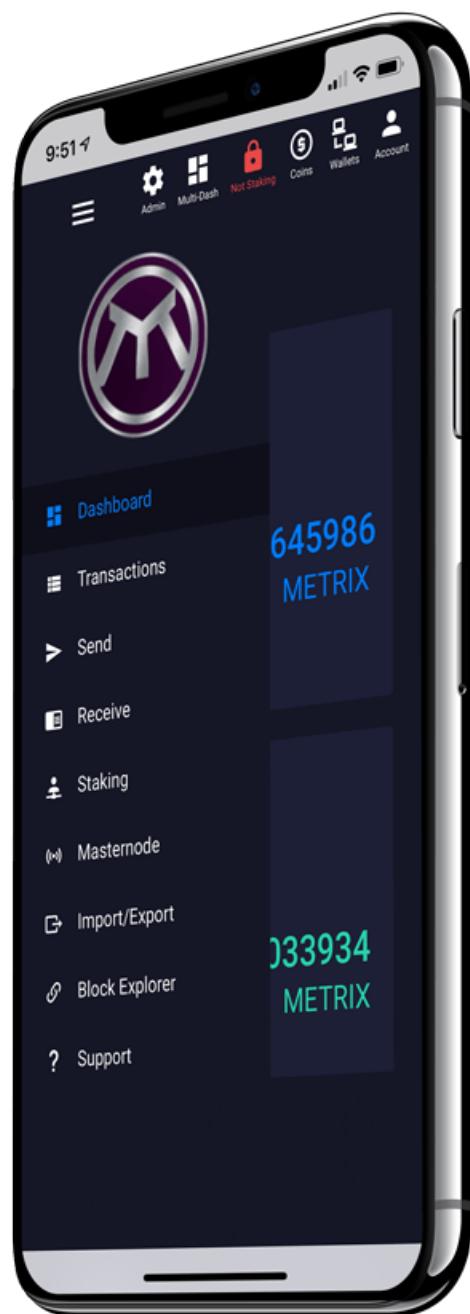

order to set up a masternode. Metrix prides themselves by offering a seamless masternode set-up solution that does away with the hassles and unnecessary expenses, making it a user-friendly product. Oh, and we must say, it looks really cool as well!

MSW permits users to own a virtual private server (VPS) that stores up to four coins capable of staking or to partake in a masternode network at affordable prices.

THE BENEFITS OF MSW ARE:

- 01** One VPS may have one masternode running while staking up to four coins.
- 02** VPS is always active 24/7, staking and receiving masternode rewards.
- 03** Users are always in control of their private keys, making it a non-custodial wallet.
- 04** Customer and Technical Support are available 24/7.
- 05** Eco-friendly online web wallet solution that does not burden your monthly electric bill.
- 06** App available in Google Play Store and Apple App Store.

SECURITY CONCERNS:

As with any online platform, there are security risks involved. Our developers have taken as many of these into consideration as possible when building this product to ensure the end-user with a platform with the utmost security inbuilt into its base. This wallet comes with user responsibility though, as the team does not hold your private keys nor a copy of your passphrase.

Being a non-custodial wallet is a fantastic feature for user security; however, it also comes with user responsibility. If you have not taken the time to securely back up your wallet, nor backed up your passphrase (seed word or phrase), then you will not be able to access your coins if you forget your login details. Similarly, if you share these details with any other person, you will also compromise the security of your coins. For this reason, we highly recommend that you take control of your coins by backing up your passphrase and private keys and secure them safely offline.

NEW CHAIN COINS:

Previously we installed METRIX as a coin of choice on MyStakingWallet. To remove any confusion, when we swapped the old chain to the current chain, the new option is for METRIX COIN. Both coins remain with the same ticker symbol MRX. However, please note that all old chain Metrix that has not been swapped over cannot be used

any longer. We have fully converted to the new METRIX COIN chain. These addresses start with the letter M on the new chain, rather than the old chain starting with the letter L.

VPS SPECIFICATIONS:

Basic machines that the wallets are hosted on:

RAM	1 GB
Hard Drive	20 GB SSD
Bandwidth	1000 GB / 30 days

Typical values experienced when running only the Metrix wallet app:

CPU	~ 10%
Bandwidth	~ 8GB / day

MOVING INTO 2021:

The Metrix team is continually talking to other projects that are interested in partnering with Metrix to list their coin, to either stake or run a masternode on MyStakingWallet. This will also allow other projects' communities to see what Metrix is all about and to become a Metroid. We currently operate 16 other coins on this platform.

GOVERNANCE MODEL, DECENTRALIZED APPLICATION (dApps) AND SMART-CONTRACTS

Metrix has chosen to upgrade its old chain to a new chain which was a hard fork of the QTUM Chain. As a decentralized public chain, the QTUM Chain regards blockchain governance as an important aspect of achieving sustainable development. It also allows Metrix to harness decentralized applications, or dApps and smart contracts.

Similarly to QTUM's governance model, Metrix offers 2 aspects of decentralized governance that work synergistically, "on-chain governance" and "off-chain governance". In on-chain governance, Metrix decentralized governance protocol (DGP) allows for Governor nodes to vote for budget or blockchain proposals. In off-chain governance,

there are 2 subforms. The first subform of off-chain governance allows for anyone to showcase a proposal to the Metroid community for an unofficial vote to gauge support. All participants may be able to assess the likelihood for their proposal being passed by Governors. In the second subform, the Metroid community may engage in forward level thinking by completing tasks and

building up the Metrix project foundation in a decentralized manner. On-chain and off-chain governance are the appropriate epitomes to decentralized governance that provides the community-driven force of development for our project.

GOVERNORS AND THE NATURE OF GOVERNANCE

Anyone from the Metroid community may set-up their own Governor node. There is not a set requirement for establishing a Governor node other than locking 7.5M MRX as collateral and either voting for a proposal, or pinging the network on a monthly basis. The minimum number of Governor nodes required to participate in voting is 100, and the maximum number of Governor nodes is capped at 1920. The Metrix DGP protocol is regarded as a form of direct democracy in which members of the Metroid community are given the opportunity to vote unofficially on proposals while Governor nodes vote officially. Everyone from the Metroid community may participate in the voting process.

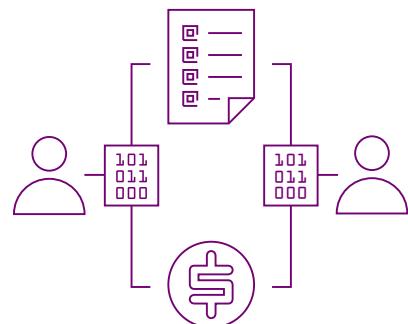

We encourage building on the Metrix blockchain given the adequate environment for creating fungible and non-fungible tokens, dApps and smart-contracts. Developers that offer their services to build on the chain, and if their budget proposal is embraced by the Metroid community and the Governor nodes, they may expect a monthly stipend of MRX for fulfilling the agreements of the smart-contract. Submitting budget proposals is not limited to developers, but rather open to any participant. All budget proposals will include the terms of the agreement and coded into a smart-contract.

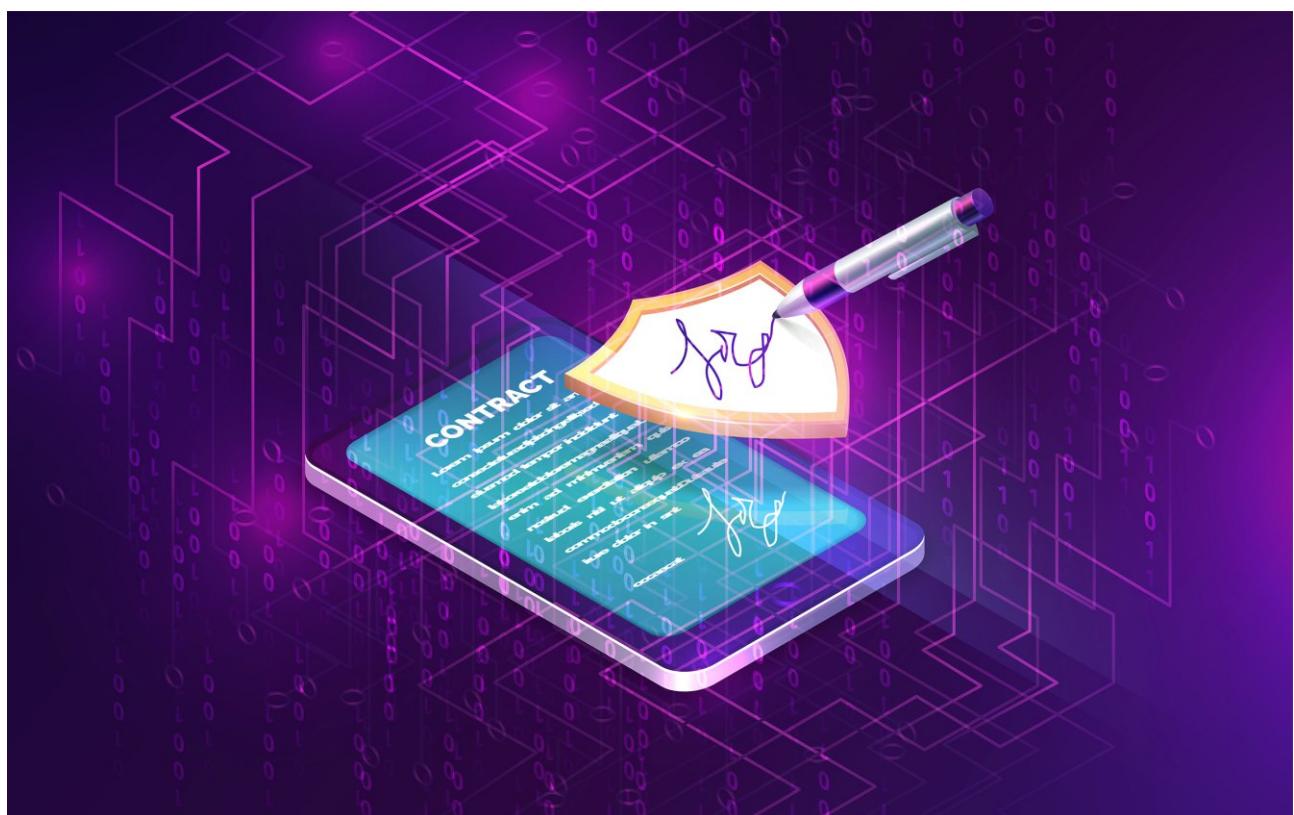

As a measure to address blockchain scalability concerns (large chain size, large block size, long block times and high gas fees), the Metroid community and Governor nodes may approve the necessary updates in real-time without the need of a hard fork or soft fork. Once a blockchain proposal has been accepted it is furnished into a smart-contract and executed automatically to the network.

All smart-contracts are subject for a review on a monthly basis by the Metroid community and Governor nodes. These smart-contracts automatically execute the term agreements within the blockchain. Executed smart-contracts embedded in the genesis blocks allow for the necessary network parameters for any updates and minting of MRX. All smart-contract transactions via on-chain governance are recorded in the Metrix blockchain, and may be easily tracked and audited.

All budget proposals require a 10% vote majority. And all blockchain proposals require a 50% vote majority.

Our project is constantly growing in numbers, and many members from the Metroid community have step-up to take on active roles within the project. All of our members come from a variety of backgrounds, experiences and skill sets. Everyone works together in unison pushing the Metrix foundational framework forward in an off-chain fashion.

REWARD STRUCTURE

DEFLATIONARY MODEL:

Prior to the Metrix hard fork to the QTUM chain, Metrix paid out staking and masternode rewards of up to 60% per annum. This is simply unsustainable over the long term; however, this structure was put in place to reward those that were the early coin holders.

The new deflationary model reduces the amount of the rewards for staking, as the diagram outlines, and there will no longer be masternodes within this network. Metrix will now run Governors, which pay the same reward structure as staking.

Rate of Interest 10%	Time of Duration 2 years
Rate of Interest 5%	Time of Duration 4 years
Rate of Interest 2%	Time of Duration 6 years
Rate of Interest 1%	Until Max Supply

Stake rewards will be given to both validator nodes and Governor nodes. The new chain hard-forked from QTUM chain will not incorporate masternodes.

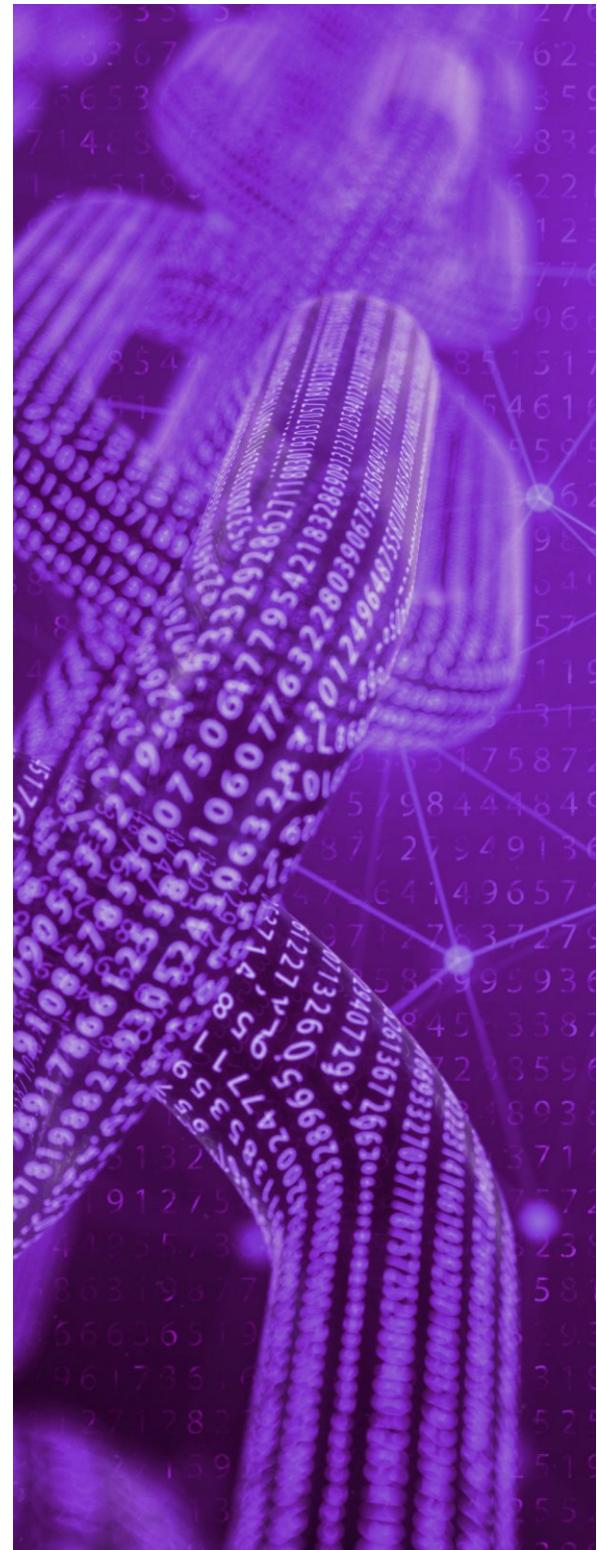

WHAT WAS THE REASON BEHIND THE HARD FORK?

The team at Metrix Coin wanted to ensure that the future of the project would meet the test of time, as this project is being built for the long term. The old block chain simply did not have the scalability required to stay at the forefront of today's technology, and this would have held back the Metrix development process and business opportunities moving forward. After many months of research, the team settled on the hard fork of the QTUM block chain, as being the best block chain to allow the Metrix developers to code it to suit what Metrix stands for. For Everyone. For Everything!

Now with the new block chain coded to suit Metrix unleashed, Metrix is looking to continue the growth of the coin over the long term with new applications and products built off this new block chain.

WHAT ARE THE NEW BENEFITS FOR CONSUMERS AND BUSINESSES NOW?

The new block chain allows many new benefits over our previous outdated chain. Other coins/projects may choose to build on top of our block chain using the Ethereum Virtual Machine (EVM) technology. This is a low cost way to build smart contracts on the Metrix block chain. Similarly, businesses wanting to partner with Metrix may also have full unrestricted use of the block chain to tokenize their business

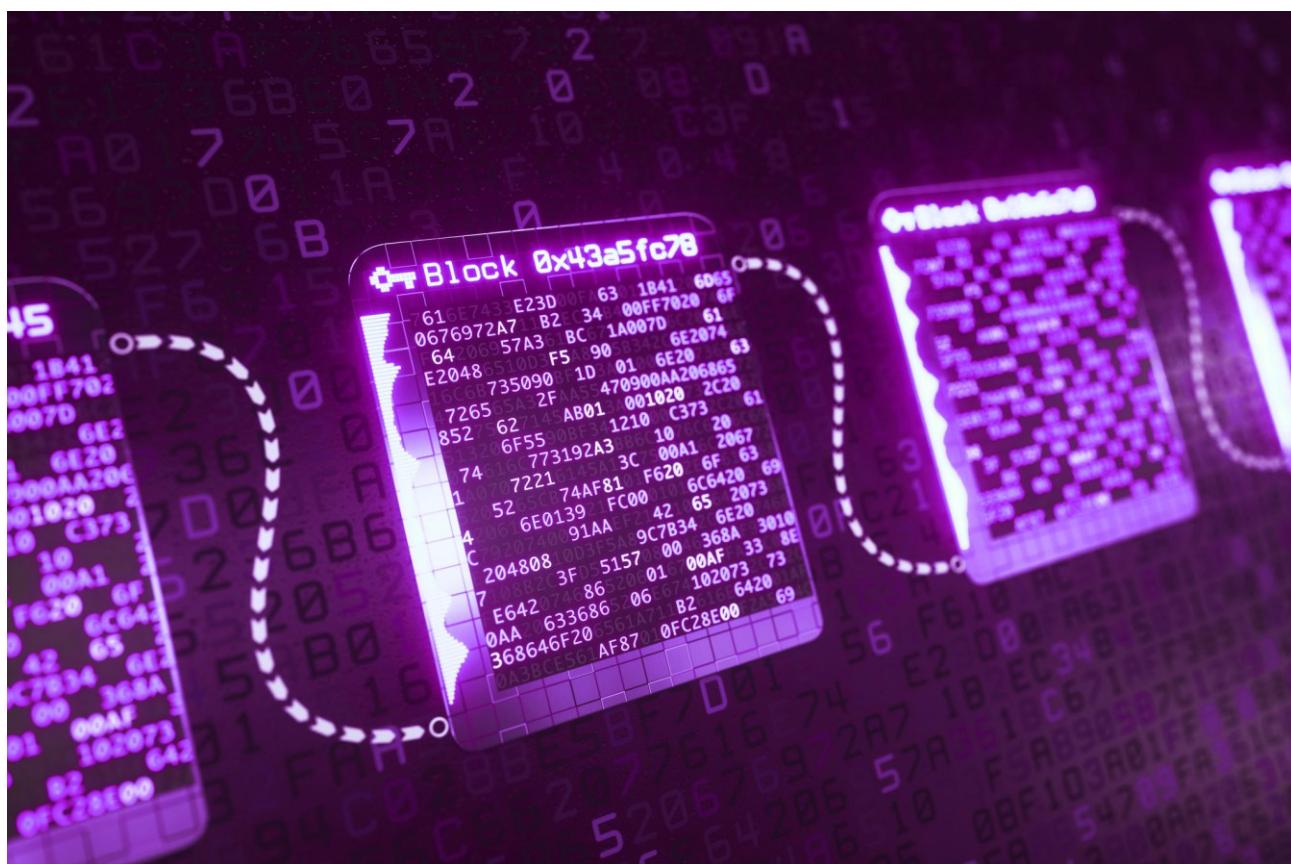

model/platform in a very cost effective way, without losing the speed and public transparency offered by the Metrix block chain.

WHAT CHANGES ARE THERE FROM THE OLD BLOCKCHAIN TO THE NEW?

Metrix has come forward in leaps and bounds with the development of the new Metrix block chain (a hard fork of the QTUM block chain). The old chain offered masternodes and staking models on a PoS block chain, whilst our new chain supersedes this older technology with the introduction of a Governance Protocol, allowing the block chain to become decentralized and community driven. Now for the first time in Metrix Coin's history, any member of the community can make a proposal for everyone to vote for or against which will shape the future of this project.

WHERE WILL 2021 TAKE US ON THE NEW CHAIN?

With a new chain and a new year ahead, Metrix has blue sky before us. 2021 is the year that all the hard work will be finally drawn together, and the Metroids community will see the solid base that has been built by the Metrix team for the project. From a solid foundation, followed by a solid road map and integrations from our partnerships, Metrix holders will start to be rewarded in the value of the coin and project. This project is not solely about the year 2021, but the ongoing development and the higher level of technical aspects that can be developed on the Metrix block chain.

BUSINESS PARTNERSHIPS

The team at Metrix is committed to growing the project through business partnerships where it will be possible to create a real-world use case for the coin. We are not looking to partner with other projects and/or businesses for the sake of simply announcing a partnership. We are striving to achieve partnerships that are going to project Metrix to the next level.

With this being said, our current partnerships to date will allow MRX to be spent as a form of money throughout brick and mortar businesses as well as online businesses. Our partnership with BA Consult SLR is being primed currently at the time of writing and will allow MRX to be spent initially on slot machines within an Italian casino. Through the clients of BA Consult, MRX will then be rolled out all over Italy with plans to be accepted in shopping centers, post offices and even banks.

Per the team's plan, the use of MRX as a form of payment in casino slot machines will be optional for players; however, incentives will be offered to players to play using MRX. This will be done by way of bonus games and additional free voucher systems. The technology we are using to allow this to work is through the current technology that BA Consult uses to digitize money through their Cashinow machines.

Metrix developers will then work with BA Consult developers to connect application programming interface (API) directly from the Cashinow machines to the exchanges.

Once this is operational, we expect the daily volume of MRX to skyrocket, and all orders will be market orders. The liquidity should increase 100 fold or more over night once these API's are in full use. Once this is working with a faultless application, the team at Metrix and BA Consult will then continue talks with the casino as well as other businesses to duplicate this model. This in turn will continue to increase liquidity and daily volume, making the project much more attractive to investors and holders alike. The API's will initially be connected to the WhiteBIT exchange through a MRX/EURO trading pair, and once the volume increases, the API's will then be connected to other exchanges in the same pairing.

SOCIAL SEND

Social Send is a blockchain project advancing cryptocurrency into social networks. SEND has created a simple and universal integration system with end result user experience in mind. Sending and receiving funds on any social network is now achievable with only a novice level of expertise. It is so easy, the user may not even realize they are utilizing blockchain technology. SEND's goal is to be the catalyst that takes cryptocurrency into the hands of the masses.

AIR COINS

There's no easier way for someone to get involved and earn cryptocurrency than by downloading Aircoins. It's a fun and interactive way to learn about various cryptocurrency projects in the space. Merging cryptocurrency with mobile gaming, augmented reality and digital advertising, players are incentivized by collecting rewards and digital assets. Aircoins have a very enthusiastic community that genuinely enjoys finding & collecting coins on their platform. What's even more encouraging is the amazing photos and testimonials they receive from users all around the world.

VENDIT

Vendit is the combination of scaling traditional financial methodologies through modern technology and the embrace and openness to new. Being first and foremost a financial technologies company with an emphasis in banking and financial modernization, blockchain and cryptocurrency tech has emerged to have shown to be a quicker and cheaper way to optimize the entire infrastructure. The future of financial technologies is bright and one of those technologies is blockchain.

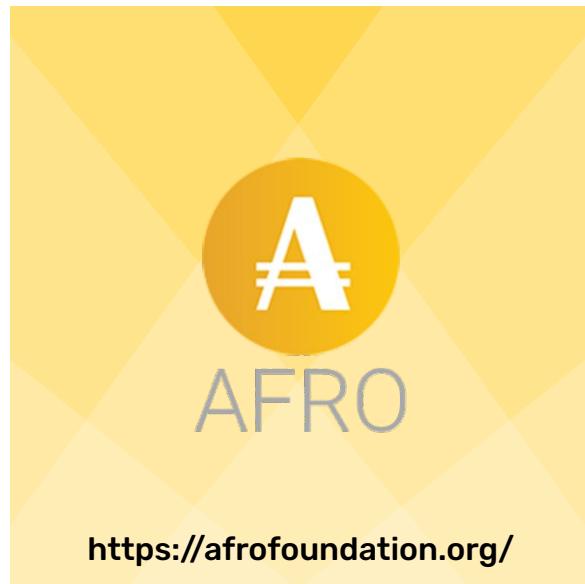

GRUDGE MATCH GAMING

Another partnership started with the design of a gaming platform that Metrix coin has now taken over. Metrix developers are currently hard at work bringing to life the Grudge Match Gaming (GMG) platform, currently in Beta testing at the time of writing. GMG will allow you to have a wager against another player, a wager on a game that you are watching, and also will allow you to challenge the leader board. Through the most up to date games being played on the GMG platform, gamers from all around the world can come together to compete against one another in a safe and secure environment. Best of all, GMG is powered by Metrix, allowing players to wager in MRX coins.

AFRO FOUNDATION

Another partnership Metrix has entered into is with AFRO Foundation and ELYA Coin, taking telecommunications globally and using MRX as the form of payment. AFRO Foundation uses the Vodafone network to ensure the highest quality of telecommunications, and they offer this to be anonymous through the purchase of their ELYA Coin. This strategic partnership will allow telecommunications on a global platform, and accepting MRX as the form of payment will propel Metrix into the telecommunication space.

ElyaTel

Elyatel is a provider of telecommunication services, including international roaming and IT solutions. It is the first ever cryptocurrency accepted for the payment of international 4G and GSM 900 roaming communications.

A.T.S. ASSISTANCE TECHNICAL SERVICE

ATS operates like an outsourcer of IT and Telecommunications services focused over Security and Voip.

They are focused on: provisioning, multi-vendor technical assistance hardware & software, help-desk, delivery, on-site services and site preparation, design and development of solutions for ICT customers & over all Italian regions and in cloud.

WG WHALE TRADING

Follow a professional trader's entries, exits and trade management from start to finish.

Walter Groff will advise when to get into a trade and when to be out of the trade. He will also advise if you need to make any changes once the trade begins. Each month the trading ledger will be posted so that you can keep a full record of all trade calls. Best of all WG Whale Trading accepts MRX for the minimal monthly service fee.

The team at Metrix are currently putting a Business Development Team together so that the project can consistently grow through ongoing partnerships. We are always on the look out for businesses or projects that we can partner with to assist them in any way

we can, as well as to grow our own project. Metrix will also be offering a bounty for any business that moves forward with a partnership agreement with Metrix Coin.

GRUDGE MATCH GAMING

The world's first cryptocurrency powered gaming platform. Play friends and teams for cash, bet on live tournaments and scout for potential esports teammates. All powered by Metrix - Get paid to game 24/7, 365

MARKET SIZE AND OPPORTUNITY

2020 eSports revenue streams were comprised of \$456.7 Million in sponsorships, \$189.2 Million in advertising, \$251.3 Million in media rights, \$103.7 Million in merchandise and ticket sales, for a total of \$1.1 Billion revenue from eSports.

By 2022, it's expected the revenue in the industry will hit \$6.02 per fan. By 2022 it's expected total audience to grow to 645 million which will make revenue in the industry over \$4 Billion.

GMG PRODUCTS

GMG is a competitive gaming platform. Gamers will have the ability to earn money by utilizing their skill set and winning matches. The onsite currency used will be Metrix (MRX) and Bitcoin (BTC). GMG's current structure allows users to compete in various challenges:

- Leaderboard challenge
- Head to head challenge
- Tournaments
- Side betting

THINK TANK THURSDAY

PURPOSE

Think Tank Thursday (TTT) meetings form an essential part of our project's internal growth. TTT aims to lay out the issues, solutions and a plan of action.

QUORUM & PARTICIPANTS

A minimum of 2 people is required to reach a quorum. The TTT lead may be self appointed. This is not fixed, but rather open to each member of the team.

MEETING FRAMEWORK

TTT meetings will be allotted 1 hour. The appointed TTT Lead will be given a max time of 15 minutes to open the discussion addressing one issue that warrants solutions and a plan of action. Following the opening discussion, a team building period of up to 35 minutes will follow. During the team building period, participants will have an opportunity to provide feedback, polish solutions, and agree on a plan of action to address the issue. The plan of action

will serve to designate tasks to participants along with deadlines agreed to among the participants. Every participant will be given a task to complete. The rest of the hour will be to close the meeting, and set the next appointment.

SCOPE OF SKILL

The appointed TTT lead and participants for any given meeting must feel comfortable to address the issue within their scope of knowledge and skill. For example, a participant with no knowledge on technical development may not be fit to formulate a solution to a technical issue.

LIST OF ISSUES

Please refer to the "Think Tank Thursday List of Issues" document that states areas that need our attention. This document will be updated in real-time, and will be accessible to everyone on the team.

FREQUENCY OF MEETINGS

Meetings will be set monthly until a good structure and flow has been established, and then it may be done every other week. Eventually, team members may host a TTT meeting as needed.

BOUNTY

The participation will be on a volunteer basis. Once a Treasury has been set, a budget will be proposed for TTT meeting attendance and completion of tasks within a deadline. This is to assure involvement and work.

HOW DOES A TTT MEETING WORK?

A member of the team may pick an issue that needs to be addressed, and jot down solutions and a plan of action. This member of the team will be appointed as TTT Lead for the meeting. An open invitation will be sent along with date, time and scope of skills warranted from participants via Discord and available social media platforms. Those willing to participate will contact the TTT Lead. On the day of the appointment, the TTT Lead will take down attendance, and start the meeting. Upon conclusion of the meeting, the TTT Lead will generate a recap of the issues, solutions and plan of action. All TTT meetings are to be

documented and saved in the TTT folder in the google drive as a reference. The TTT Lead will follow-up with all participants to assess status updates of tasks. If participants need more time or assistance to complete a task, then it should be communicated immediately to make accommodations.

TEAM

Metrix is a community where professionals from multiple disciplines collaborate together to build a scalable blockchain with accessible products. Our project encourages decentralized governance where anyone may act as a

Governor in our chain, following our governance protocol and requirements (see DGP section). Thus, Metrix is a community-driven project.

For everyone. For everything!

CONCLUSION

As you can see, there is a lot to be excited about with Metrix. Our team and community have been and will continue working hard to drive Metrix to the top of the CMC rankings. We have developed and delivered working products and platforms like MyStakingWallet and MyNodePool. We have cultivated partnerships with over a dozen cryptocurrency projects, showing our commitment to making cryptocurrency a communal ideal that helps all people stay connected in this new financial paradigm.

We have an incredible desktop wallet that will incorporate a new voting system for our community to contribute to the future path of the project. Our developers are world class, and they are committed to bringing our new chain and upcoming products to the mass public with ease-of-use as a main priority. Our core team is dedicated to

curating more business partnerships, just as they have with our recent groundbreaking partnership with companies that will deliver Metrix into the real world, across many industries throughout Italy and beyond.

Our Metroids community is going to remain an integral key to our growth by giving us their invaluable feedback and direction. The future promises to be bright, with more applications, use-cases, inclusive decision-making processes, partnerships, and exchanges. Metrix will become a leader in the cryptocurrency industry, and we have begun this journey. We hope you have been inspired by our path forward and decide to join us. We look forward to having you along for the ride of a lifetime.

**A digital asset.
For everyone. For everything!**
